

TEST WINNER!

TECHNICAL DATA

Type:	Bass reflex
Drive units:	Tweeter: 3/4" dome Woofer: 6 1/2"
Crossover frequency:	3.200 Hz
Effective frequency range:	28-22.000 Hz
Sensitivity level (1W/1m):	91 dB
Nominal impedance:	4 ohm
Amplifier requirement:	20-150 W
Dimensions (WxHxD mm):	188x950x310 mm (With spikes, height +35 - 40 mm)
Color finish:	Black high-gloss
Net weight:	15,6 kg

Test report

Blue Diamond

A sparkling jewel

Norway: EyeFi, no 2 February 2001

Conclusion

"Light, free, and spacious! Fantastic bass that integrates very well with the rest of the sound image. Lots of space: height, width, depth and above all FANTASTIC!. Is that clear?"

Audio Pro Blue Diamond

ITALY: Audio Review, no 2 2001

Conclusion

"An elegant and a refined design, that confirms the validity of the well-proven, long-tested ace-bass technology, that allows a sonic reproduction of remarkable level both on stereo and home theater applications. The price seems justified by the specs of the realization (practically you have two active subwoofers) and by the level of performance."

Blue Diamond

HUNGARY: Sztereó, no 6 2001

Conclusion

"These advanced technology quasi bipolar (front and side) radiating systems combine lush spacious soundstaging, lifelike depth-of-field, razor-sharp resolution and pinpoint 3-D image with powerful subwoofer bass (to below 20Hz, high efficiency), wide dynamic range and easy-to-position convenience for superb musical reproduction so real that it has been called, 'a sonic miracle!'."

European championship!

GERMANY: STEREOPLAY no 5 2000

Conclusion

With its Blue Diamond, Audio Pro is pulling out all the stops of its skills. In the midrange and the high frequencies the Blue Diamond sounds fresh and lively. In the bass area, thanks to its active technique in ace-bass, it sounds almost sensationally good. The whole thing at a price that should make the competitors start thinking.

Another new success?

SWEDEN: HiFi & Musik no 2 2000

"The very successful Audio Pro speaker Black Diamond has now got a bigger brother in Blue Diamond. It is easy to think they sound alike but there is a big difference, especially from 55Hz and downwards. The mighty 10" woofer and the ace-bass amplifier ensures a physical deep bass with an exact impact, with devastating power and control."
