

## test report **SUB EVIDENCE**

### **A pleasure for eye and ear** Sweden: HemmaBio 4-2001

"Sub Evidence shows again that Audio Pro can deliver well designed and well sounding products to very good prices."

"Sub Evidence is a cubic little box which is easy to hide in the room, and even if you see it, it's not a disadvantage since it's clean design is very good looking."

"It looks more expensive than it actually is, and it never feels wrong to have bought a product that gives a lot of value for your money."

**Music:** Sub Evidence doesn't go extremely deep. The port is mounted downfiring and the physical limitations might make those who are looking sub bass of earthquake characteristics, to add more money to get more of this. However this is a product I like a lot. It fits excellent to all types of music. In other words, a very good subwoofer in it's class.

**Home Theater sound:** It plays suprisingly tight and powerful. Here you have the possibility to buy a product that gives you high quality sound.

**Conclusion:** The big little winner is Audio Pro, who has made a very nice product. You get quality and good sound. When you buy it, you feel that you have gained a lot for your money. Definitly the product in the test that you can use when you upgrade to a more expensive hifi or home theater system and surely be content with it for a long time ahead.

*Other subwoofers in the test:*  
JVC SP-PW880, PIONEER S-W80S, YAMAHA YST-SW45
