

CINEMAROOM

THE BEST HOME THEATER SOUND

SWEDEN: Hemmabio, no 3, 2004

"All five speakers are of the same type, with rounded cabinets in wood fibreboard."

"A 3,5" driver with rubber suspension and a paper membrane, takes care of the bass and the midrange. The treble is handled by a 1" tweeter. On the back is a bass opening the size of half your thumb. The binding posts are not of the timid kind. They accept both spades, banana plugs and peeled wires."

"Audio Pro CinemaRoom sounds really nice from the very first tone. We appreciate the speakers perfect voice-matching and the fine resolution is definitely the best in this test. The sound is neutral, close to light. The sound reproduction is on the edge of thin, but recordings still have wonderful life. It is kept together very well, if you don't take into account the subwoofers difficulties in giving a stable bass fundament at movie levels in rooms larger than 20 m². On lower levels there are no problems in that area, thank goodness and we are enjoying the - considering the price - impressive multi-channel reproduction."

Recommended loudspeakers:

LOW PRICE AND GOOD

SWEDEN: Ljud & Bild hemma, no 2, 2004

"With a firm grip around our piggy bank, we were looking at lower priced multichannel-systems. We found Audio Pros CinemaRoom, and we were definitely not disappointed!"

"For 5000 SEK we were sceptical, but that scepticism soon disappeared. At normal sound levels this system works really well on movies because the bass is more full than distinct. Music works nicely since it is held together very well. But don't expect a dynamic firework, it doesn't exist in this price range."

"Overall this speakersystem is one of the very best we have heard in this price range."

REASONABLE CAN ALSO BE EXCELLENT

NORWAY: Lyd & Bilde, no 8, 2003

"In total, this setup is among the best we have tested within this price range."

"We have to say this sounds pretty good. The first thing that hits us is that all channels cooperates in an irreproachable way. Voices that lie in the center of the sound image, are not completely distinguished from the frontspeakers, but are nicely mixed in an acoustic totality. This makes it more realistic. The subwoofer is very well integrated with the rest of the system."

CINEMAROOM

Cinema Room is a voice-matched complete Home Theater speaker set that is very easily placed in your home. The 5-piece Cinema C1 set, together with the ace-bass subwoofer Cinema Sub, will give you a perfect Home Theater system for Dolby Digital (5.1). One of the satellites is designed as a center speaker, and it goes with a specially designed stand for placement just above or under the TV set. The enclosed wall bracket (WB 201) allows easy mounting of the satellites on walls.

CinemaRoom is available in cherry or silver.
